# IF YOU DON'T STOP CONTAMINANTS, THEY WILL STOP YOU.

When it comes to avoiding unplanned downtime, bulk diesel filtration is critical. Modern equipment *will* stop running if the fuel isn't virtually contamination-free before it's pumped into the vehicle. Don't run the risk of prematurely plugged onboard filters, damaged fuel injectors, or worse.

Donaldson Clean Solutions will help you clean your diesel before contamination stops you. **Keep Running. Achieve More.**

# DIESEL IS DIRTY.

# DIRT IS BAD.

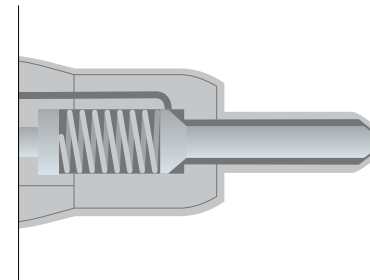

# REMOVE THE DIRT. ACHIEVE MORE.

As diesel travels from refinery to terminal locations to local bulk storage and finally to your bulk tank, it picks up contamination that is **deadly to today's engines.**

Your local distributor delivers diesel that meets or exceeds fuel-industry standards for cleanliness. This is **not clean enough** for your equipment.

Shown at 100X magnification.

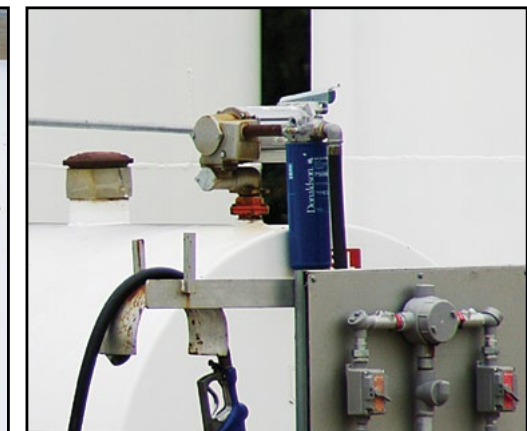

ISO 22/21/18

ISO 14/13/11

Typical fuel dispensed into equipment vs. what is desired for modern engines.

By removing dirt, water and other contamination before your fuel ever touches your equipment, you'll eliminate costly unplanned downtime, **Keep Running** and **Achieve More.**

# GET A CLEAN SOLUTION.

To ensure that you're pumping clean, dry fuel into your equipment, call or email a Donaldson Clean Fuel expert. No matter where you are or the size of your operation, there's a Clean Solution that will help you **Achieve More.**
